Feedback Report.

Part 1: Feedback:

“Eish...undeclared use of AI. Looks ok, well structured and functional. Storing image path only? How can that work as a business application?”

Solution:

I remade the whole project for part 2 where I added functions for users to upload any type of media and updated the Ui to make it look more “business application”

Part 2: Feedback:

“Moving in the right direction but I do not like the scale of the application and this is going to cost you marks. Like the clickable cards. The white and green is hard to read...add more demo data. The data you do have...I click and then what? Something to think about. Data selection I can't get to work...”

Solution:

For Part 3, I made sure to find a better way of store and reading data and I updated the UI so that it is easier for the users to read.
